TOO MUCH METAL

Walker Believes Within Year or Two Copper Demand Will Be Enormous.

BRIGHT OUTLOOK IN

Investors Whose Present Timidity Prevents Purchase May

Advance copies of Walker's Copper Let ter received out west enter into detail in regard to the present copper outlook, and the following optimistic extract from the same will prove of interest locally:

"I figure that the world's present surplus does not exceed two months' consumption requirements. Consumption is now exceeding 1,800,000,000 pounds of copper annually, or 150,000,000 pounds monthly, which is equal to the present total productive capacity of the world's total productive capacity of the world's mines. Of the 387,296,925 pounds existing world's surplus, not over 300,000,000 pounds could possibly be made to disappear by silvancing prices, as the great volume of operations will hereafter necessitate a surplus of at least 100,000,000 pounds in process of accumulation at refinerles and other shipping points, in warchouses, to supply sudden increases in demand, etc.

fineries and other shipping points, in warehouses, to supply sudden increases in demand, etc.

"Of course, the United States is normally the greatest copper consumer, and should there be any considerable further business depression here, it will tend to prolong the existence of an abnormal world's surplus. On the other hand, when political, financial and business conditions reach that point of readjustment where the financing of new enterprises can be resumed, this country's consumption should quickly advance to \$0,000,000 pounds monthly. Meanwhile, we are consuming more copper in this country than ever before, and foreign consumption is increasing at an almost unprecedented rate. Taken altogether, the outlook for the metal situation is growing brighter all the time. I feel confident that, not withstanding the new mines which will soon become factors in the situation, copper consumption during the next three or four years will exceed production. After this period, in which the output will continue to increase rapidly, there is every reason to believe that there will be a very decided half in the growth of production, and we shall again see copper sell at the sensational high prices.

"Copper share prices have ceased to decline and the tendency now seems to be slightly toward improvement. The market is so dull and narrow that speculative operations have been entirely discouraged. What little there is represents the average of accounts by a few speculative investors who bought stocks at much higher prices. Almost everybody seems to be waiting for an opportunity to buy coppers, and all other stocks for that matter, at lower prices. Later on, therefore, quite general disappointment may take the place of the present pessimism.

"The prices at which copper stocks are now selling not only reflect the degree-

olun

Crown Pt Daiy-Judge E Crwn Pt E Tin Con E Tin Dev

R and A Seven T S King

may take the place of the present pessimism.

"The prices at which copper stocks are
now selling not only reflect the depression of the metal market, but would seem
to indicate that all the mines had degenerated to mere holes in the ground. As
a matter of fact, the current low metal
prices are due chieffy to the fact that
the mines are in magnificent shape and
actually doing too well. Low metal prices
are a temporary condition, however.
Within a year or two all of the mines
will be called upon to produce every
pound of copper they possibly can, and
metal prices undoubtedly will prevail
which will nearly or quite double their
present average profit."

pper they possibly call and service Ms and outstedly will prevail Majestic Ms nearly or quite double their rage profit. US EXTENSION MARKET Mt Lake Ex May's Oil Nev Hills Niouse. COLUMBUS EXTENSION

For over a week after the management of the Columbus Extension company encountered the heavy flow of water in the tunnel, the flow was three feet deep and six feet in width steadily, the flood carrying with it many hundred tons of splendid concentrates. This enormous flow of water has now subsided to such an extent that the company can enter the workings and continue development.

General Manager Tony Jacobson stated yesterday that the Columbus Extension was destined to be either one of the finest producers of rich ore in the state or one of the greatest disappointments. At the present time there is a twenty-foot face of first and second-class ore reaching out toward the contact, and work shortly should gain the cave from which poured all the concentrates when the water flow was first struck. All along the 4000-foot tunnel, says Mr. Jacobson, one can see silver and lead ore deposited by the water, while concentrates are well distributed down Little Cottonwood creek. The company has two cars of ore new on the local market. N'house New York Ohlo Cop O'hongo P Oil P Metals Victor Victoria West Nev Y Con Ver Cop

That agitation over the conservation policy is liable to break out in exceedingly virulent form during the annual convention of the American Mining congress, which will be held in Los Angeles, Cal. September 26 to October 1, is indicated by the activity which is being displayed by both sides in presenting the issue to the mining interests of the west. The mining industry is the one most vitally affected by the general policy of conservation. Its leaders are men who while supporting the policy in a general way, demand, nevertheless, that a liberal and progressive policy be enacted—one which will allow the free use and development of western resources by the present generation.

that no more could be jarred loose at

ISSUE WAS STRONG

opment of western resources by the present generation.

Senator W. E. Borah of Idaho, a state where mining and power interests are paramount, sees great danger in adopting a policy which is too restrictive. Mr. Borah is slated for an address at the Los Angeles meeting of the Mining congress, and in a recent interview, characteristically set forth his position with regard to conservation as it is liable to affect the west.

He says:

affect the west.

He says:

"Any conservation policy incorporated into law must have as its basic and fundamental principle that of economic use and delevelopment. Our natural resources are not to lie idle, imprisoned and unusable. If you would join with us in that proposition, dedicating them to the economic use of those who develop them, we will gladly join you in formulating a policy of development and control and regulation which will avoid weste and extravagance and monopoly, in so far as is possible.

"But upon a policy of non-use, of strangulation of the great west, we stop at the first call for legislation. If strangulation is to be had, it will first be tried upon something else."

JAPAN NEEDS HIGH IN THE MASON **RED METAL PRICES**

Further Decline Meant the Reported Discovery Is Given as Closing of Mines in Flowery Kingdom.

> According to Reiji Kanda, who represented the Japanese government on mining and metallurgy at the recent Japanesc-British exposition in London, the life of copper mining in Japan is at a critical time, and any further decline in the price of the metal must mean the closing down

> of many of the mines. He said.
> "The total production of copper in Japan amounted last year to about 114,-000,000 pounds, which is about four times that produced ten years ago. The five largest mines of Japan produced last year

maller

these five large mines about 9 cents per pound to make their copper. The average cost of all other mines in Japan is slightly under 12 cents per pound. Therefore, whenever the price of the metal in London declines below £60 per ton, the profits of these mines are practically wiped out.

"The opinion of Japanese mining men regarding the metal situation of the world is that it is in the hands of the copper producers of the United States. They believe that the production of copper in Japan will remain almost stationary during the next few years and ultimately that production must decrease, as Japan's copper deposits are preity well known, and there is not sufficient unexplored territory to permit more than a slight increase during the next ten years. They feel that copper production throughout Europe must gradually lessen also, and that the producers of the United States will control the situation of the future."

PURCHASE COPPERS ON ALL THE WEAK SPOTS

James A. Pollock & Co., Bankers and brokers, furnish the following, received ver their private wire yesterday after-

noon:
Paine, Webber & Co. Letter, Boston—
The Sunday holiday did not cause any orders to accumulate and the opening was as dull as ever. Isle Royale was comparatively active, selling as high as 22. Superior Copper was also strong. North Butte looked a little better, but the transactions were so small that they had no significance. The duliness has continued so long that activity must commence soon, and we believe this will come with an upward movement. We advise the purchase of all coppers for a five-point rally.

Logan & Bryan Stock Letter, New York.—The stock market displayed quiet strength throughout today's session, excepting in the last hour, when scattered realizing caused slight recessions from high least caused slight recessions from

strength throughout today's session. excepting in the last hour, when scattered realizing caused slight recessions from high levels. The irregular tone of the London market did not have a material effect on the trading, but the latter seemed to be governed almost entirely by news relative to the Maine election of course, it was too early to expect anything authoritative in regard to the same, but the opinion was expressed by many that the contest, although probably close, would not result in a material change in complexion of the party now in control. The fact that steel exhibited such a good tone in spite of the unsatisfactory report on Saturday, together with the rather optimistic utterances with regard to the future of the unsatisfactory report on returns referred to above he construed as favorable, efforts will undoubtedly be made to force higher range of prices tomorrow, but we would not neglect opportunities to lighten accounts on the upward movements, as recessions will probably occur with sufficient frequency to make such operations preditable.

Hornblower Letter, Boston—Dullness was again the chief feature of the copper market. Isle Royale and Superior

operations profitable.

Hornblower Letter, Boston.—Dullness was again the chief feature of the copper market. Isle Royale and Superior Copper were the strongest features of the list, with gains of a point. The balance of the market, while very inactive, was strong and with fractional advances. Traders worked for higher prices whenever an opportunity presented itself, and it was noticeable that there is still a scarcity of offerings. Sentiment is bullishly inclined and the feeling is that we will see a better level of prices, although it may be slow about coming about. Good judges are advising their clients to buy coppers on all weak days.

ter.

Captain J H. Lanyon, manager of the Duluth and Lemhi Mining company, at Wimpey creek, says: "Wimpey will be a great creek, and I firmly believe a large mining camp will follow the efforts of the various companies operating there. The ore is there and the right people are on the ground, competent and qualified to go after it." Samples from the main vein run \$95 in gold. This company has a large group of claims located in the heart of the rich belt. Many ledges cross its ground, and most of the exposures show high values.
